```
The invention discloses a new isolated or recombinant nucleic acid which CC encodes a polypeptide having a phytase activity. Also claimed is a nucleic acid probe, an amplification primer sequence pair, an expression CC cassette comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic cacid, a transgenic non-human animal or plant, or its seed, comprising the cacid, an antisense oligonucleotide, inhibiting the translation of CC aphytase message in a cell, a heterodimer comprising the polypeptide and comprising an antibody that specifically binds to the cC acid, a hybridoma comprising an antibody that specifically binds to the polypeptide, a food supplement for an animal, an edible enzyme delivery comprising a medible engine pellet comprising a granule edible enzyme delivery colypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, which gain anti-phytase antibody, producing a recombinant polypeptide, determining whether a compound binds to the polypeptide, identifying a modulator, whole cell engineering of new or modified composition, and processing of the phytase polypeptide, increasing the resistance or thermostability of the phytase polypeptide, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a cc digestive system and processing of corn and sorghum kernels. The phytase activity comprises catalysis of phytate (myo-inositol-hexaphosphate) to is useful in improving the feeding value of phytate rich ingredients or as an aid in phytate digestion. The sequence presented is the DNA cc encoding the modified Escherichia coli phytase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match 100.

The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to condified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to cm prove the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC provides easy manufacture of the active ingredient loaded biocompatible CC composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present
                                                                                                                                                                                                                                                                                                                                     Short JM,

CC least one polypeptide having phytase activity, where the polypeptide is a CC modified sequence (AEE75421) derived from the Escherichia coli K-12 appA CC phytase (AEE75419). The modification of the enzyme, comprising a series CC of mutations, improves the thermal tolerance and protease stability of CC the protein. The specification also claims a pharmaceutical composition; CC a kit; an immobilized phytase; a fertilizer or soil additive; a liquid CC supplement for preventing muscle cramps; a hydrating agent; a tissue CC culture or cell culture media; and a plant food additive, all comprising CC the novel phytase, and a method of reducing pollution and increasing cC utrient availability in an environment or environmental sample by CC degrading environmental phytic acid. The novel enzyme is a dietary CC supplement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful CC and increasing nutrient availability in an environment or environmental complete by degrading environmental phytic acid, where the environment or CC environmental sample comprises a soil or a body of water. The immobilized CC converse in useful in foodstuffs for improving the feeding value of converse in interestion converse in interestic converse in interestic converse in interestic converse in interestic converse interestic converse converse in interestic converse converse converse converse converse c

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a recombinant phytase (EC 3.1.2.8) protein and its encoding also nucleic acid molecule. Phytases of the invention is a thermostable protein. They are useful in foodstuffs, for oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also useful in gene therapy and in production of transgenic animals. The present sequence is the SEQ ID NO: 1 which is given in the sequence listing. This sequence differs from the SEQ ID NO: 1 shown on page 19 in disclosure of the specification (see AED50824).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Short JM,

The present sequence is that of a polynucleotide encoding a novel compodified phytase derived from the Escherichia coli appA protein, with compodition proved thermal tolerance and protease stability compared to the wild-cype. The present invention relates to a novel formulation, comprising at compodified sequence (AEE75419) deserved from the Escherichia coli K-12 appA compodified sequence (AEE75419). The modification of the enzyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit, an immobilized phytase; a ferrilizer or soil additive; a liquid colluture or cell culture media; and a plant food additive, all comprising nutrient availability in an environment or environmental sample by degrading environmental phytic acid. The novel enzyme is a dietary complement useful for treating, preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful cample by degrading environmental phytic acid. The novel enzyme is a dietary complement useful for treating muscle cramps. The liquid supplement is useful comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of compilers useful comprises a soil or a body of water. The immobilized specification but was created from the wild-type sequence (AEE75418) and the information given in claim 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-MAR-1999;

SEQ ID NO 6; 74pp; English

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially

The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phyrase incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coli K12 appA phytase mutant DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1901 BP; 472 A; 498 C; 501 G; 429 T; 0 U; 1 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease comprove the feeding value of phytate rich ingredients, and in diet of CC improve the feeding value of phytate rich ingredients, and in diet of CC incorporate animals including mammals, fowls and fishes, commercially conficient avian species such as pigs, yoats, laboratory rodents, commercially commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present composition, higher yields and loading efficiency. The phytase CC sequence is Escherichia coli KI2 appA phytase mutant DNA.

                                                                               ક
                                                                                                          밁
                                                                                                                                                                            밁
                                                                                                                                                                                                   ্ষ
                                                                                                                                                                                                                                                                                                                                       CC formulation, comprising at least one polypeptide having phytase activity, CC where the polypeptide is a modified sequence (AEB75412) derived from the Escherichia coli K-12 apph phytase (AEB75412). The modification of the CC enzyme, comprising a series of mutations, improves the thermal tolerance CC and protease stability of the protein. The specification also claims a CC pharmaceutical composition; a kit; an immobilized phytase; a fertilizer CC or soil additive; a liquid supplement for preventing muscle cramps; a CC hydrating agent; a tissue culture or cell culture media; and a plant food CC additive, all comprising he novel phytase, and a method of reducing pollution and increasing nutrient availability in an environment or CC environmental sample by degrading environmental phytic acid. The novel CC enzyme is a dietary supplement useful for treating, preventing or compared supplement is useful for preventing muscle cramps. The CC injuid supplement is useful for preventing muscle cramps. The method is useful for reducing pollution and increasing nutrient availability in an convironment or environmental sample by degrading environmental phytic acid, where the environmental sample by degrading environmental phytic acid, where the environmental sample preventing muscle cramps. The method is cody of water. The immobilized phytase is useful in foodstutifs for improving the feeding value of phytate rich ingredients. NOTE: The CC present sequence is shown in the sequence listing but not discussed celsewhere in the specification.
                                                                                                                                                                                                                                          Query Match

the phytates.
                                                                                                                                                                                                                                                                           Sequence 1323 BP; 323 A; 353 C; 357 G; 289 T; 0 U; 1 Other;
                                                                                                                                                                                                                                                                                           The present sequence encodes a phytase enzyme from Escherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel dietary aids comprising sustained release biocompatible composition which comprises an agent (enzymes such as phytase, amylase, esterase, protesse) that assists in digestion. The biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivering enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or in the production of foodstuffs from livestock. The present sequence is Escherichia coli phytase DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1323
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Fig 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New dietary aids comprising sustained release biocompatible compositions, comprise agent that assists in digestion, useful for delivering enzymes, therapeutics, medicine or agents to an organism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    25-MAY-2000, 2000US-00580937

                                                                                                                                                                                                                                                                                                     The patent discloses recombinant bacterial phytase from Escherichia coli CC X12 appA phytase. The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease CC stability at low pH. The recombinant phytase is useful for improving the CC improving the growth performance of an organism that consumes it, in CC vitro purposes related to research, discovery and development. They are CC also used for generating recombinant digestive systems, in feed treatment processes and for in CC vitro purposes related to research, discovery and development. They are CC also used for generating recombinant digestive system life forms, for CC the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that CC the reduction or possible elimination of the need for mineral CC the reduction or possible elimination of the need for mineral CC thus increasing the amount calories and nutrients present in the feed. The present sequence is a DNA encoding E. coli B phytase protein
                                                                                                                                                                                                                        Best Loc

RESULT 12
ADA19445
The invention relates to an isolated Escherichia coli polynucleotide CC encoding a phytase enzyme appearing as ADA19450 and having amino acids CC modification from W68E, 084W, A95P, K97C, S168E, R180Y, N226C or Y277D. CC Also included the E. coli appa gene ADA1949 (or an oligonucleotide CC derived from it) or its mutant sequence ADA19452, expression vectors, host cells, a method of improving nutritional value of a phytate-CC containing foodstuff by contacting the phytate-containing foodstuff with a pure phytase enzyme mutated phytase (where the phytase enzyme catalyzes the liberation of inorganic phosphate from the phytase in the phytate-CC containing foodstuff), a method to produce an animal feed containing a CC microbial phytase (comprising culturing the plant cell, plant part or plant under conditions where the nuclectide sequence is expressed and CC converting the plant cells, plants or plant into a composition for animal composition for animals (comprising the plant seeds, plant CC cells, plant parts or plants in admixture with a phytate-containing foodstuff), a method to treat a human or an animal able to benefit from CC comprising administering to the human or animal the plant seed, plant composition administering to the human or animal the plant seed, plant comprising administering to the human or animal the plant seed, plant comprising administering to the human or animal the plant seed, plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-MAR-1999;

The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence encodes E. coli B wild-type phytase.

The invention relates to a method for producing phytase that involves corporating a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow compressing the nucleic acid in a yeast under conditions that allow commercially at low ph. The phytase enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease stability at low ph. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytate rich ingredients, and in diet of commercial including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, composition, higher yields and loading efficiency. The phytase composition, higher yields and loading efficiency. The phytase concorporated in to the dietary aid is safe for animals. The present of the sequence is Escherichia coli B phytase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Short JM,

CC The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC stability at low pH. The phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytate rich ingredients, and in diet of CC improves animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as chicken, ducks, doves, parrot, etc., CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present Sequence is Kangaroo rat Escherichia coli phytase mutant DNA. Note: The present sequence is not shown in the specification but has been derived cover.
                                                                                                                                                                                                                                                                                                                                                                                                            Short JM,

```
The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease stability at low pH. The phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC commercially significant mammals such as pigs, goats, laboratory rodents, commercially CC significant mammals such as sigs, goats, laboratory rodents, commercially CC expression of the such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in distary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present sequence is Escherichia coll M phytase mutant DNA. Note: The present CC sequence is not shown in the specification but has been derived from Escherichia coll B phytase DNA ADO50291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
